

with MIT App Inventor and Amazon Alexa

Jessica Van Brummelen and Hal Abelson

CSAIL, MIT

Abstract

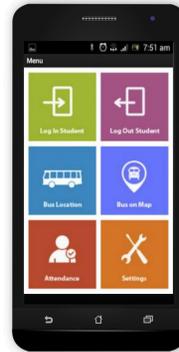

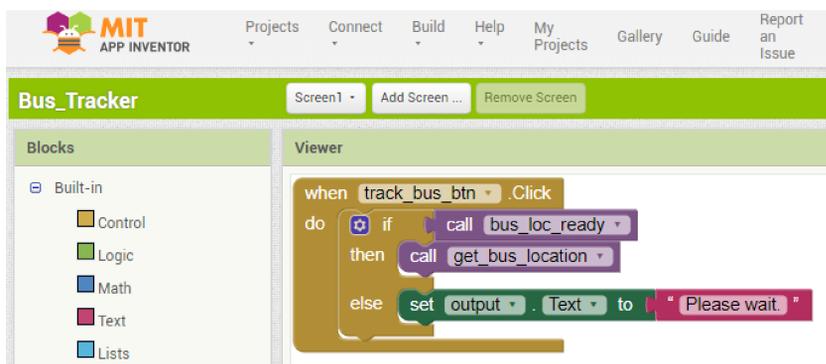

This work aims to democratize conversational AI technology. Currently, **MIT App Inventor’s block-based coding tools** empower anyone to develop their own mobile apps. Soon, users will also be able to **program their own Alexa skills, conversational AI, and neural networks** using blocks. Through middle school workshops, research questions, such as **“Can students learn about the capabilities, limitations and implications of AI through developing conversational AI mobile apps?”**, will be explored.

Background

MIT App Inventor

- Tool for anyone to develop mobile apps
- Block-based coding, a visual way to program

Conversational AI

- Rule-based AI (e.g., question/answer)
- Control blocks (e.g., If statement block)
- Generative AI (e.g., deep learning)
- Machine learning blocks (e.g., LSTM block)

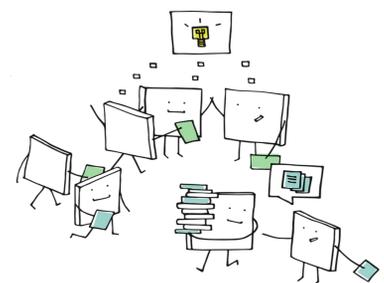

Amazon Alexa skills

- *Voice User Interface* defines user interaction
- JSON on Alexa Developer Console
- *Endpoint function* defines backend action
- Node.js JavaScript on AWS Lambda

Machine Learning Blocks

Long Short-Term Memory (LSTM) Extension

- Generative AI using text as input

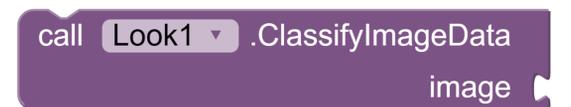

- E.g., Nietzsche-esque text generation

“What dream the will to the origin of the self-diver in love the sees and an according to the self”

“Look” Extension

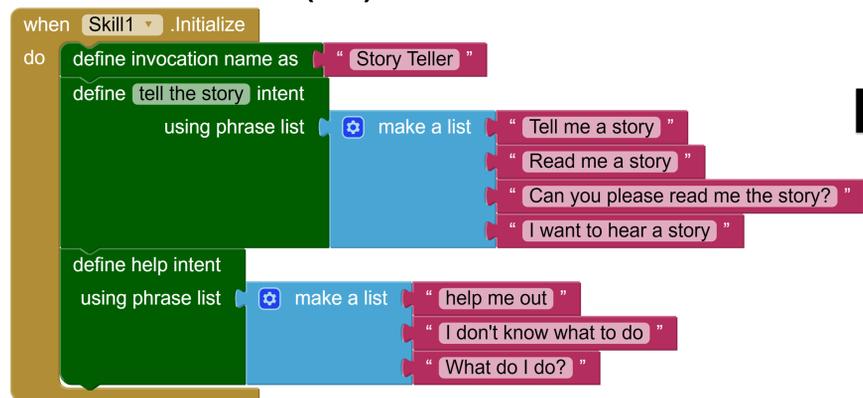

- Visual classification network with MobileNet
- Give Alexa “eyes”

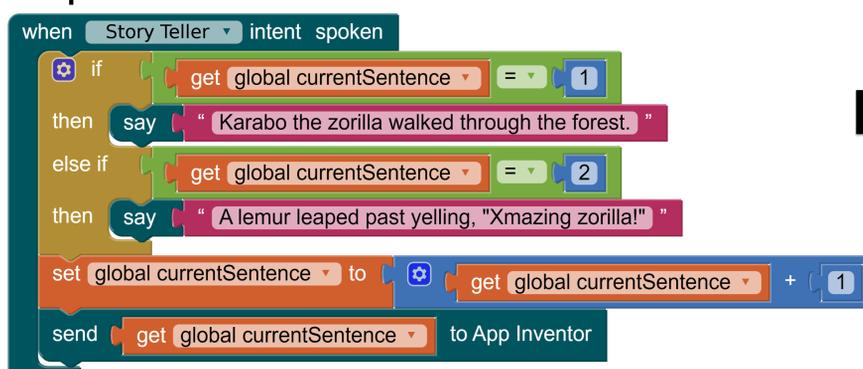

Conversational AI Blocks

MIT APP INVENTOR

Voice User Interface (VUI) blocks

Endpoint blocks

amazon web services

JSON Interaction Model

```
{
  "interactionModel": {
    "languageModel": {
      "invocationName": "story teller",
      "intents": [
        {
          "name": "tell the story",
          "slots": [],
          "samples": [
            "Tell me a story",
            "Read me a story",
            "Can you please read me the story?",
            "I want to hear a story"
          ]
        },
        {
          "name": "AMAZON.HelpIntent",
          "samples": [
            "help me out",
            "I don't know what to do",
            "What do I do"
          ]
        }
      ],
      "types": []
    }
  }
}
```

Node.js JavaScript

```
const handlers = {
  'story_teller': async function () {
    let voiceOutput = '';

    if (currentSentence == 1) {
      voiceOutput = 'Karabo the zorilla ' +
        'walked through the forest.';
    } else if (currentSentence == 2) {
      voiceOutput = 'A lemur leaped past ' +
        'yelling, "Xmazing zorilla!";';
    }
    currentSentence = currentSentence + 1;
    sendToAppInventor({
      'currentSentence': currentSentence
    });
    this.response.speak(voiceOutput);
    this.emit(':responseReady');
  }
};
```

Curriculum

- Incredible growth in AI over the past 10 years
- What will the next 10 years look like?
- How can we prepare students for this future?
- Teach skills for the **future of work**
- What is AI?
- What are AI’s limits and capabilities?
- How can we use AI to do good?
- Teach **high-level AI concepts**
- What is rule-based AI?
- What is machine learning?
- What is generative AI?
- Explore **research questions**
- With reasonable abstraction, can students develop conversational AI applications?
- Can students learn about the capabilities and implications of conversational AI through conversational AI app development?
